## Costs and Charges Illustration for Money Market Funds

This document aims to provide you with certain scenarios in order to illustrate how the costs and associated charges will impact your investment returns. Although these examples are based on actual incurred costs (or reasonable estimations of such costs) as a proxy for expected costs and charges, actual costs and charges incurred in respect of any future transaction may be different.

For simplification and ease of understanding, the calculations are based on the following assumptions:

- The client is able to add the following parameters based on which personalized scenarios are presented: subscription plan, currency of the Money Market Fund chosen, initial investment amount, holding period, monthly investment amount, expected annual return.
- Three scenarios based on expected annual return are presented:
  - First, where annual expected return is the one added by the client;
  - Second, where annual expected return (%) is 0%;
  - Third, where the annual expected return (%) is the one added by the client, just negative.

In all three scenarios the annual return is assumed to remain constant during the whole holding period (which is not true in actual basis, as the Fund's yield changes daily).
- All amounts, including subscription plans are in EUR.
- The assumption is made that the client invests one lump-sum amount in the beginning on the first day of the month. The client is able to define a monthly fixed investment amount in euro, but the assumption is made that all recurring investments are settled on the first day of the following month.
- For the whole holding period, the assumption is made that the client does not request to be paid out any of the net returns earned during the month, these are reinvested at the beginning of the following month.
- The assumption is made that every first and last day of the month are business days.
- Normal market circumstances are considered during the whole holding period where the LVNAV and CNAV MMFs do not encounter drops in maturing proportions that could lead the fund to apply an Exit Liquidity fee.
- For FX transactions above the FX limits, a fee of 0.6% on the exchanged amount is charged for all plans. The assumption is made that all FX transactions are issued within market hours, where the 1% fee for exchanges outside market hours is not applicable.

Each client has to choose a subscription plan - Revolut Business cannot be used without having a plan. Money Market Funds are available on 3 subscription plans (Grow, Scale and Enterprise), where each has different subscription fees and FX limits. Table (1) summarises the monthly subscription fees and FX limits and fees.
