

## **Authentication via ID Austria**

For secure login and identification, we offer the option of authentication via ID Austria. If you use this function, personal data (e.g., encrypted, sector-specific personal identification number, first name, last name, date of birth) will be exchanged between us as the service provider and the identity provider (Republic of Austria, technically implemented by the Federal Computing Centre and A-Trust).

This processing is based on the E-Government Act (E-GovG).

For more information about how we process your personal data generally, please see our [Customer Privacy Notice](#).
